## **ABSTRACT**

“Spark Dental Care” is designed and built to meet all the requirements of a dental clinic and to help the dentist in managing their clinics in an effective manner. With just a few clicks the user can schedule faster, record treatment plans easier, simplify billing.

This project aims at creating an application which will automate the process in “Spark Dental Care”. Using this it is possible to keep track of patient information like appointment schedule, personal records, previous medical records, treatment records, prescriptions. The “Spark Dental Care” is used for collecting, managing, saving, and retrieving medical information for the patients, and for creating reports for the patients. Patient records are used by the dentists in order to organize the records of the patients in their practice.

### **Modules**

1. Appointment module
2. Prescription module
3. Payment module
